

PHP Test:

1. Added style.css under css folder
2. Added js.js under js folder
3. Added debug logs under logs folder
4. Created project.ini for Project specific settings like csv, name etc..
5. Created readme.txt for set up instructions

Script Developed using

Mac, Apache, PHP 5.4, Zend Studio

Tested in

Firefox, Safari and Google Chrome and Internet Explorer 11

Set up Instructions:

- 1) Copy complete attached folder in root directory
- 2) Csv file must have read permission
- 3) Log file must have read permission
- 4) Please read readme.txt for more instructions
- 5) Go through project.ini for any settings

Sorting Order

- 1) Sorting order implemented at server side, as there is no refresh button on the screen after page is loaded.
- 2) With this server side sorting, user will get latest data even csv updated dynamically

Please note.

- 1) Did not use any third party modules in the script
- 2) Developed own script as per the given instructions and updated comments in the code base wherever necessary.

Demo can be seen at my personal website
